SUMMERY

AI and Computer Science graduate (BSc Hons, 2:1) from Nottingham Trent University. Hands-on experience developing and designing AI-integrated applications and full-stack software, including a commercial website for a local café and an AI-integrated iOS social media app using cognitive computing. Practical knowledge of machine learning, computer vision, distributed databases and ethical AI, with a strong interest in intelligent automation and data-driven product development. Seeking digital roles where I can build scalable, ethical AI solutions that deliver measurable impact.

TECHNICAL SKILLS

- AI and Machine Learning: Supervised and unsupervised machine learning, natural language processing, cognitive computing, computer vision, predictive modelling, autonomous decision systems, ethical AI frameworks, bias mitigation
- Software Engineering: Full-stack web development, Swift and iOS development, software design and implementation, API integration, Docker, Linux, Git, GitHub, Agile/Scrum
- Data Engineering: Distributed database engineering, database management, data analytics, big data programming, real-time data synchronisation
- Programming Languages: Python, C++ and SQL (basic proficiency)
- Tools and Platforms: Xcode, Core ML, TensorFlow, Jupyter Notebook, Visual Studio Code, Firebase, Supabase, Kaggle, VMware, Ubuntu, Android Studio, Claude, Cursor, Codex and Kimi

EXPERIENCE

Full-Stack Developer | Pyala | October 2025–Present

- Website: www.pyala.co.uk
- Independently designed, developed and maintain a production-ready full-stack web platform for a local café.
- Developed SEO-optimised front-end interfaces to improve online visibility and support customer conversion.
- Integrated the website with the in-store till system and continue to maintain and optimise website performance and reliability.

AI AND SOFTWARE DEVELOPMENT PROJECTS

AI-Integrated iOS Birthday Social Media and Health Platform

- Technologies: Swift, Xcode, Core ML, computer vision, Firebase and AI APIs
- Architected a native iOS application using Core ML and computer vision for image training, birthday recognition and health diagnostics.
- Integrated Firebase to provide a real-time database architecture supporting concurrent user interactions and data persistence.
- Implemented cognitive computing features to support autonomous decisions based on environmental sensor inputs and personalised user engagement.

EDUCATION

Nottingham Trent University | 2023–2026

- BSc (Hons) Computer Science – Artificial Intelligence | Upper Second-Class Honours First Division (2:1)
- Relevant modules: Machine Learning (Foundations and Advanced), Natural Language Processing, Cognitive Computing, Distributed Database Engineering, Ethical AI(LLM) and Big Data Programming

ACADEMIC COURSEWORK AND RESEARCH

- Developed supervised and unsupervised predictive machine learning models using large-scale industrial datasets, feature engineering and cross-validation to optimise reliability and performance.
- Designed horizontally scalable distributed database architectures with fault-tolerance mechanisms to support big data workloads.
- Applied cognitive computing principles to develop autonomous systems capable of responding to environmental inputs and making intelligent decisions.
- Evaluated ethical AI frameworks, focusing on bias mitigation, privacy by design (GDPR) and real-world societal impact.

CERTIFICATIONS AND PROFESSIONAL DEVELOPMENT

- AI Compliance and Ethics for Data Centers - In progress
- Building Trust: Ethics for AI-powered Chatbots - In progress
- Responsible AI: Transparency & Ethics - In progress

ADDITIONAL INFORMATION

- Interests: Skiing, travel, TED Talks, digital technology, robotics and football
