Professional Summary

AI Engineer graduate (BSc Hons, 2:1) from Nottingham Trent University with proven experience deploying production-ready machine learning solutions and full-stack applications. Built and shipped a commercial platform for a local business and developed an AI-integrated iOS social media application with cognitive computing capabilities. Passionate about intelligent automation and data-driven product development. Seeking a graduate AI/ML engineering role to deliver measurable business impact through scalable, ethical AI solutions.

Education

Nottingham Trent University | 2023 - 2026

BSc (Hons) Computer Science | Artificial Intelligence 2nd Class Honors - 1st Division (2:1)

Relevant Modules: Machine Learning (Foundations & Advanced), Natural Language Processing, Cognitive Computing, Distributed Database Engineering, Ethical AI, Big Data Programming

Applied Projects Undertaken (Final Year & Independent Work)

- AI-Integrated iOS Social Media & Health Platform | Swift, Xcode, Core ML, Computer Vision, Firebase, AI APIs
- Architected a native iOS application leveraging Core ML and Computer Vision for image training, intelligent birthday recognition, and health diagnostics.
- Integrated Firebase to deliver a real-time, scalable database architecture supporting concurrent user interactions and data persistence.
- Embedded cognitive computing features enabling autonomous decision-making based on environmental sensor inputs and personalised user engagement.

Commercial Platform | www.pyala.co.uk | Full-Stack Web Development | October 2025 – Present

- Independently designed, built, and maintain a production-ready full-stack web solution for a local café, handling end-to-end branding, UI/UX, and DevOps.
- Implemented secure payment processing, real-time inventory management, and SEO-optimised front-end interfaces to drive online visibility and customer conversion.
- Streamlined online ordering operations and in-store till integration, continuously optimising site performance and reliability.

Core Academic Foundations (Coursework & Research)

- Developed supervised and unsupervised predictive machine learning models on large-scale industrial datasets, utilising feature engineering and cross-validation to optimise reliability and performance.
- Engineered horizontally scalable distributed database architectures with fault-tolerance mechanisms to support big data workloads.
- Applied cognitive computing principles to build autonomous systems capable of environmental response and intelligent decision-making.
- Assessed ethical AI frameworks extensively, focusing on bias mitigation, privacy-by-design (GDPR), and real-world societal impact.

Technical Skills

- **AI & Machine Learning:** Supervised/Unsupervised Machine Learning, Natural Language Processing, Cognitive Computing, Autonomous Decision System, Ethical AI Frameworks, Predictive Modelling, Bias Mitigation
- **Software Engineering:** Xcode, Swift (Mobile Development), Web Development (Full Stack), Software Design & Implementation, Systems Software, Project Management (Agile/Scrum), API Integration, Docker, Linux, Git
- **Data Engineering:** Distributed Database Engineering, Information & Database Management, Data Analytics Techniques, Big Data Programming, Real-time data synchronisation
- **Programming (Basic Proficiency):** Python, C++, SQL, Swift
- **Tools & Platforms:** Excel, MS Word, Jupyter Notebook, TensorFlow, Cursor, VS code, Firebase, Kaggle
- **Professional Skills:** Cross-functional collaboration, Time management, Conflict resolution, public speaking, technical documentation

Activities & Interests

- Skiing, Travel, TED Talks, Digital Technology, Robots and Football
